• Actions taken by Solent Towage
Towing Hook

Towing Line

Gog rope
The task

- This incident occurred on the evening of March 30th 2015
- The task was to assist in the departure of ‘Donizetti’ a small chemical tanker berthed port side to on one of Fawley’s coastal berths
- On berth wind of force 4 – 5
- Tide was nearing the end of the flood
- Departure was at 2000
- It was a dark cold winter night
The incident

• Asterix was instructed to make her tow fast on the starboard quarter on Donizetti and stand by to lift the stern off the berth whilst the bow thruster would be used to lift the bow off.
Causes

- Direct -
  - Excessive transverse force acting on Asterix
  - Failure of hook release system

- Indirect -
  - Ineffective communications between tug and vessel
  - Lack of situation awareness by coxswain and crew member
  - Insufficient RA detailing the risk of operating with a fixed gog line
  - Vessel’s acceleration and speed whilst initially clearing the vessels berthed ahead of Donizetti
Actions taken by Solent Towage

• Uprated the level of training required by a Coxswain before being signed off
• Upgraded the risk assessment on towing to include greater detail on the risks of girtling and the effective use of a gog rope
• Any future small tug will be fitted with a gog winch
• Uprated the training schedule and planned maintenance routine to include more emphasis on tripping the hook under load
• Developed a pre-tow checklist which includes confirming the passage plan with the pilot / vessel prior to passing the tow line up
Actions continued

- In collaboration with ABP Southampton, instigate joint training between pilots and coxswains
- Installed foot operated microphones for VHF radios
- Greater emphasis on weather conditions prior to assigning a tug to the task
- Preparations to certificate all coxswains with
- Voluntary Towage Endorsements
