

Scott joined Boskalis Westminster in early 2017. Previously, Scott has worked in the offshore energy, marine and military surveillance industries. With approx. 5 years with James Fisher & Sons and several years as a strategic consultant in the marine/offshore energy sector, Scott has a wide range of knowledge in the industry. His role within Royal Boskalis N.V covers both Boskalis Westminster Ltd and fellow Boskalis group company VBMS (marine construction /dredging and submarine cable installations and associated marine support respectively)

Founded in 1933, Boskalis Westminster operates in all sectors of the UK dredging market. We maintain and develop ports and waterways, provide materials and construction services to the country's sea defences, reclaim land and offer specialist services to the oil, gas and water industries. Westminster's fleet of dredgers and support equipment is, generally, based in the UK thereby minimising response times and mobilisation costs. This versatile and varied fleet can be matched to requirements for optimum performance and cost efficiency.

Boskalis Westminster is a wholly owned subsidiary of Royal Boskalis Westminster nv, the world's largest dredging group, which is currently active in more than 50 countries across the globe.

With the support of other group subsidiaries, Boskalis Westminster has the capability and resources to undertake the complete spectrum of dredging related tasks including coastal, inland waterway and seabed protection, immersed tube tunnel construction, offshore services, rock and breakwater construction, environmental projects, marine drilling and blasting, port and waterway engineering and marine pipeline installation.
